***Allowable Subject Matter***

1. Claims 1-5, 7 and 13 are allowed.

The following is an examiner's statement of reasons for allowance:

Prior art does not teach that, the compensation winding is coupled to a source of a supply voltage, wherein a polarity of the current varies in accordance with a difference between an output voltage of said amplifier and said supply voltage and wherein a polarity of said amplifier output voltage remains the same both when said current is at a first polarity and when said current is at a polarity that is opposite to said first polarity recited in combination with all limitations recited independent claim 1.

Prior art does not teach that, a source of a second digitally encoded signal coupled to an input of said second digital-to-analog converter, wherein during a degaussing interval, said value of said first and second digitally encoded signals are made to be equal for preventing the generation of said current in combination with all limitations recited in independent claim 13.

The remaining dependent claims 2-5 and 7 are allowable for at least above reason.

Prior art made of record and not relied upon is considered pertinent to applicant's disclosure. None of record prior arts stands alone or combination with the others discloses all limitations required in claim invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Citation of relevant prior art***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Prior art Lee et al. (U.S. Patent No. 5,847,511) discloses an automatic image rotation compensation circuit and method.

Prior art Lee (U.S. Patent No. 6,013,989) discloses a wideband horizontal linearity correction circuit.

Prior art Johnston. (U.S. Patent No. 4,344,021) discloses a system for compensating for transfer characteristic variations of electron guns.
